CONTENTS

Chapter 1 **Introduction of Remote Sensing**.....**1**

1.1 What is remote sensing?.....1

1.2 History of remote sensing.....4

1.3 Types of remote sensing.....4

1.4 Digital image.....5

Chapter 2 **Atmospheric Applications**.....**7**

2.1 Observation of cloud, rain and aerosol.....7

2.1.1 Observation of cloud..... 7

2.1.2 Observation of rainfall.....9

2.1.3 Observation of aerosol..... 11

2.1.4 Atmospheric observation by lidar.....14

2.2 Observations of stratospheric ozone..... 17

2.3 Observation of greenhouse gases, trace gases, and atmospheric temperature..19

2.3.1 Importance of greenhouse gas measurement from satellite..... 19

2.3.2 Principle of remote sensing of greenhouse gases by using short-wavelength infrared radiation..... 19

2.3.3 Example of greenhouse gas retrievals from satellite data..... 20

2.3.4 Atmospheric sounding by thermal infrared remote sensing..... 21

2.4 The use of remote sensing in meteorological service.....23

Chapter 3 **Land Applications**.....**29**

3.1 Land use and land cover.....29

3.2 Digital elevation models and maps.....31

3.3 Urban thermal environment.....33

3.4 Natural disaster.....36

3.5 Agriculture.....38

3.6 Natural environment.....41

3.7 Forestry.....42

3.8 Water balance and heat balance.....44

3.9 Desertification.....47

3.10 Resource exploration.....49

3.11 Glacier and glacial lakes.....51

Chapter 4 **Water Applications**.....**57**

4.1 Quality of water and ocean color.....57

4.1.1 Quality of water and spectral properties..... 57

4.1.2 Coastal regions, lakes and marshes..... 59

4.1.3 Open water..... 60

4.1.4 Oil pollution..... 61

4.2 Sea surface temperature....62
4.2.1 Thermal emittance from sea surface.... 62
4.2.2 Atmospheric correction to estimate surface temperature.... 63
4.2.3 Application to coastal and pelagic waters.... 64
4.3 Coral reef, seaweed bed and aquatic organism....64
4.3.1 Basics of remote sensing of sea floor and depth estimates.... 64
4.3.2 Coral reef and seaweed bed.... 66
4.3.3 Aquatic organism.... 68
4.4 Observations of offshore ocean surfaces by microwave sensors....68
4.4.1 Sea ice.... 68
4.4.2 Sea surface winds and waves.... 69
4.4.3 Sea surface height and surface current.... 70
4.4.4 Sea surface salinity.... 71
4.5 Application to fisheries....72
4.5.1 Application to marine fisheries.... 72
4.5.2 Application to aquaculture in marine fishery.... 75
Chapter 5 **Radiation and Reflection....81**
5.1 Characteristics of electromagnetic waves....81
5.2 Thermal radiation and Planck's law of radiation....82
5.3 Surface reflection of electromagnetic waves....84
5.4 Spectral reflectance 87
5.5 Atmospheric scattering and absorption....89
Chapter 6 **Platforms....95**
6.1 Platforms....95
6.1.1 Overview of platforms.... 95
6.1.2 Altitude of platforms.... 96
6.2 Satellite....96
6.2.1 Satellite system.... 96
6.2.2 Orbit.... 99
6.3 Aircraft....104
6.3.1 Types and characteristics of aircrafts.... 104
6.3.2 Flight planning of an aircraft.... 105
6.3.3 Position and attitude measurement of an aircraft.... 106
6.4 Other platforms....107
6.4.1 Stratospheric platform.... 107
6.4.2 UAV (Unmanned Aerial Vehicle).... 108
6.4.3 Vehicles.... 109
6.4.4 Ships.... 110
Chapter 7 **Sensors....113**
7.1 Sensor types....113
7.2 Principle of sensors....114
7.2.1 Principle of optical sensors.... 114

7.2.2 Principle of microwave sensors..... 115
7.3 Characteristics of sensors.....122
7.3.1 Characteristics of optical sensors..... 122
7.3.2 Characteristics of microwave sensors..... 124
7.4 Examples of sensors.....126
7.4.1 Examples of optical sensors..... 126
7.4.2 Examples of microwave sensors..... 131
Chapter 8 **Data Acquisition and Processing.....137**
8.1 Operations and mission planning.....137
8.1.1 Data acquisition requests..... 137
8.1.2 Operational constraints..... 139
8.1.3 Operations plan..... 141
8.2 Reception and processing of remote sensing data.....141
8.2.1 Converting the incident electromagnetic energy to digital data and recording geometric information..... 141
8.2.2 Data transmission..... 143
8.2.3 Product levels..... 146
8.3 Distribution and use of remote sensing data.....147
8.3.1 Data format..... 147
8.3.2 Obtaining data..... 149
8.3.3 Information extraction from remote sensing data..... 151
Chapter 9 **Radiometric Correction and Cloud Detection....155**
9.1 Radiometric calibration.....155
9.1.1 What is radiometric calibration? 155
9.1.2 Radiometric calibration in visible to shortwave infrared..... 156
9.1.3 Radiometric calibration in thermal infrared..... 158
9.2 Image quality improvement.....160
9.3 Atmospheric correction.....161
9.3.1 What is atmospheric correction?..... 161
9.3.2 Atmospheric correction in visible to shortwave infrared..... 163
9.3.3 Atmospheric correction in thermal infrared 165
9.4 Cloud detection.....167
9.4.1 Importance of cloud detection in remote sensing..... 167
9.4.2 Method of the cloud detection..... 167
Chapter 10 **Geometric Correction.....173**
10.1 What is geometric correction?.....173
10.2 Principle of geometric correction and coordinate systems.....175
10.2.1 Shape of the Earth and map coordinates..... 175
10.2.2 Coordinate systems and systematic correction..... 178
10.3 Method of geometric correction.....180
10.3.1 Processing levels of satellite images..... 181
10.3.2 Resampling using parameters after systematic correction..... 181

10.3.3 Precision correction..... 182
10.3.4 Ortho-rectification..... 183
10.3.5 Image interpolation method 185
10.4 Accuracy assessment of geometric correction.....186
10.4.1 Accuracy assessment using validation points..... 186
10.4.2 Accuracy assessment using simulated images..... 188
10.5 Mosaic processing.....188
Chapter 11 **Image Enhancement and Feature Extraction: Spectral Information.....193**
11.1 Enhancement of spectral information.....193
11.1.1 Grayscale conversion..... 193
11.1.2 Color space conversion..... 198
11.2 Feature extraction from spectral data.....201
11.2.1 Useful information in remotely-sensed spectra..... 201
11.2.2 Spectral vegetation index..... 205
11.2.3 Some other spectral indices..... 207
11.2.4 Information extraction from hyperspectral data..... 208
Chapter 12 **Image Enhancement and Feature Extraction: Spatial and Temporal Information.....213**
12.1 Image enhancement and feature extraction of spatial information.....213
12.1.1 Sharpening and edge/line extraction.....213
12.1.2 Extraction of texture..... 217
12.2 Time series image processing.....218
Chapter 13 **Image Classification.....225**
13.1 Flow of image classification.....225
13.2 Training data and image classification.....228
13.2.1 Training area and training data..... 228
13.2.2 Supervised classification and unsupervised classification..... 228
13.3 Unsupervised classification (Non-hierarchical clustering).....229
13.3.1 K-means method 229
13.3.2 ISODATA method..... 231
13.4 Supervised classification.....232
13.4.1 Multilevel slice method 232
13.4.2 Decision tree method 233
13.4.3 Nearest neighbor method 234
13.4.4 Maximum likelihood method 235
13.5 Assessment of image classification accuracy.....239
13.5.1 Concept of accuracy assessment..... 239
13.5.2 Confusion matrix 239

Chapter 14 **Principles of SAR**.....**245**
14.1 SAR observation principles 245
14.1.1 Outline of SAR..... 245
14.1.2 Real aperture radar and SAR..... 249
14.1.3 Synthetic aperture technique..... 253
14.2 Processing of SAR data.....255
14.2.1 Pulse compression..... 255
14.2.2 Synthetic aperture processing..... 258
14.2.3 Ground-range conversion and geometric distortion in SAR image..... 260
14.3 Characteristics of SAR images 262
14.3.1 Microwave scattering and SAR intensity image..... 262
14.3.2 Surface scattering and volume scattering..... 264
14.3.3 Speckle noise..... 267
Chapter 15 **SAR Advanced Analysis**.....**271**
15.1 Interferometric SAR.....271
15.1.1 Observation principle of interferometric SAR..... 271
15.1.2 Analysis of interferometric SAR data..... 275
15.1.3 Examples of analyzed results..... 277
15.2 Polarimetric SAR.....279
15.2.1 Observation principle of polarimetric SAR..... 279
15.2.2 Analysis of polarimetric SAR data..... 280
Acronyms.....291
Index.....295
